

KAISER PERMANENTE CORPORATE HEALTH PROMOTION PROGRAM

Services

Kaiser Permanente will provide all coordination of professional services, tracking of data for group summary report, equipment, handouts as well as set-up and take down of services provided.

It is preferred that all events be scheduled at least 3 months in advance.

Wellness Screening Offerings

Packaged Offerings:

Personal Wellness Profile Assessment –Biometric assessments including BMI (height and weight), cholesterol (total cholesterol & HDL), glucose, and blood pressure screening with same day results.

Employee Receives-

- Personal Wellness Profile Report.** A detailed educational assessment designed to help evaluate current lifestyle, identify health risks, and decide where and how to make improvements. This can be done either electronically or by paper.

Employer Receives- (The following are provided with a minimum of 50 participants and do not include participants names)

- Executive Summary Report** - Summarizes the primary health findings in aggregate form.
- Repeater Report** - Tracks results of those who have participated in multiple assessments. This report is ideal for tracking progress over time.
- Productivity Report** - Looks at the cost of the population's existing risk factors and demonstrates cost savings of health improvement.

Incentive Structure Development and Management – Let us help you design an incentive structure that works for you and your employees. Once created, we can help with implementation and management of participant ratings in a secure way. Cost varies according to incentive structure and size of employee group.

Individual or Combined Offerings: (May require a minimum # of participants. Summary reports available for a fee)

Blood Pressure – Screening for blood pressure and pulse. Awareness of risk for coronary heart disease, results given with explanation and referral for additional screening or suggestion to contact primary care provider when necessary.

Body Composition – Using bioelectrical impedance, this screening calculates percentage of body fat and amount of body weight comprised of fat. Information on target range, BMI, and health education materials provided.

Cholesterol Screening – Finger stick blood sample gives each individual Total Cholesterol, HDL, and ratios. Or fasting Total Cholesterol, HDL and Triglycerides. Participants receive same day results. Minimum of 50 participants.

Diabetes Screening – Finger stick blood sample provides random blood glucose screening for a non-fasting glucose level. Participants screened to identify possible diabetes risk. At risk participants are given resource information and are referred to primary care provider.

SINGLE – SESSION WORKSHOPS

1 HOUR. DURATION. EXCEPTIONS MADE UPON REQUEST
